

A MESSAGE FROM THE ADMINISTRATOR

Montana continues to make significant strides in improving the safe and healthful working conditions of all employees. With the assistance of the Montana Occupational Safety and Health Training Institute, and the support of safety professionals throughout the State, we can collaborate to continuously improve the health and well-being of workplace environments in Montana.

The vision of the Montana Occupational Safety and Health Training Institute is centered around the conviction that formal training and education must be linked to and made accessible to all Montana employers in order to bring about positive change. Both public and private sector employers from all regions of the State, regardless of their size, have the opportunity for occupational safety and health training through the Institute. Courses offered by the Training Institute provide assistance to employers to comply with existing safety and health requirements and to create a broader impact on reducing workplace injuries and fatalities.

This concept is unique – it's the first State-supported Occupational Safety and Health Institute of its kind in the nation, and the results are outstanding. In the last three (3) years the Training Institute has trained over 3,000 employers and employees.

I encourage all Montana employers and employees to take advantage of this excellent resource. Working together, I know we can make Montana workplaces the safest in the country!

Jerry Keck

A handwritten signature in dark ink that reads "Jerry Keck". The signature is written in a cursive, flowing style.
